Scopus

Scopus is the premier source of author and organization profiles

Scopus uses state-of-the-art technology coupled with comprehensive manually curated knowledge bases to profile authors and organizations.

As a result, Scopus can help you understand **who** is researching **what** and **where** with greater accuracy than any other database, providing **invaluable data for strategic decision-making**.

The diagram consists of four circular nodes arranged in a diamond shape, connected by double-headed arrows. The top node is blue and labeled 'Article 85+ million'. The bottom node is dark grey and labeled 'Funding 3.5+ M awards 450+ funders'. The left node is light blue and labeled 'Author 17+ million'. The right node is orange and labeled 'Organization 94+ thousand'. Each node contains a small icon representing its category: a book for articles, a person for authors, a building for organizations, and a dollar sign for funding.

How have we enriched Scopus research signals in 2021 and 2022 to date?

Scopus Author Profile pages	Author Feedback Wizard	Documents Details page & Metrics	Preprint content in Scopus Author Profiles	Funding data	Open access (OA) filters
We've expanded the existing functionality to provide additional information and context.	We have made the workflow more intuitive and introducing the ability to edit preprint and grant data.	New features include a Views Count metric and Scopus Author Profile previews. Enhanced policy citation data in PlumX metrics demonstrates research use in policy.	SSRN preprints are joining the content we've added from four other major preprint servers since January this year.	We've increased the number of articles containing funding information, optimized tracking functionality, and launched a project to add historical funding award data to Author Profiles.	We have added or updated OA classifications for 17 million documents to date, so OA content is easier to locate and analyze.

Abstract

The discourse of sustainable development is highly influential in global and national governance frameworks, though its meaning and operationalisation are context-dependent and have evolved over time. The transition from the Millennium Development Goals (MDGs) to the Sustainable Development Goals (SDGs) reflects the most recent evolution in this discourse. We analyse key differences in storylines between the MDGs and SDGs and develop an analytical framework to study these, focusing on the objectives of sustainable development, the means to reach those objectives, and the relations between developing and developed countries. We use this framework in quantitative and qualitative discourse analyses of the policy
